

FORMATIVE ASSESSMENT

Guidelines for Formative Assessment / Recap at the Beginning of the Lesson

5-10 min

at the start of every lesson

A short diagnostic recap of the previous lessons: it shows what learners have kept, what needs review, and what to change in the lesson ahead.

1 Duration

- Keep the formative assessment at the beginning of the lesson concise and focused, typically lasting 5-10 minutes.
- Ensure that the review of previous materials is brief but comprehensive, allowing enough time for students to recall and revisit key concepts.

2 Diagnostic Activities

- Design the activities to target the learning objectives of the previous lessons and identify areas of strength and areas needing further review.
- They could be speaking, written activities, or an online quiz

3 Reflection and Feedback

- Encourage students to reflect on their learning from the previous lessons and identify any gaps or misconceptions.
- Provide feedback on students' responses and offer guidance or clarification as needed to address any areas of confusion.

4 Adjustments to Instruction

- Use the insights gained from the formative assessment to adjust instructional strategies, pacing, or content delivery for the current and future lessons.
- Tailor the lesson activities to address any identified areas of weakness or to build upon students' existing knowledge and skills.

In practice. The formative assessment is built into the session PPT, or you can customise it based on your students' level.
